How can SEG better serve local geophysicists	I would need information on what people can really expect on behalf of SEG. For instance, I think there are no students members because they don't want to pay any fee for that, when they cannot see any clear

	advantage for doing so
How can SEG gain new members	The same I stated above can serve for this item.
Petroleum, Mining and Near Surface industries	
major players	I do not know them, but a good place to dive in for this can be the 19 th petroleum congress that is going to be held in Madrid, in 2008
major fields or minenary districts	Asturias (North of Spain)
politics and the government's role	As every other country now, renewable energies are being promoted by the government
geophysics as a career	It could be in the future, if geophysicists can find a role in the development of renewable energies, environmental issues. Very limited horizon for geophysics in Spain for oil and gas.
Role of Country Representatives and Regional Coordinators	
How can the SEG/GAC better support you in your SEG role	More information needed. It that information is available at the SEG web site, where exactly. Advantages for being a member or a student section. SEG compete with EAGE in Europe. Information must be available via mail, nobody is thinking of attending GAC annual meetings.
